

TTS REPORTS V1.0

Go / No-Go Release Checklist

Release readiness checklist for customer rollout

Document purpose: prevent accidental launch before the app is ready for customer use.

Product	TTS Reports
Baseline build	TTS_REPORTS_v1_0_STABLE_BUILD_VERSION_LABEL
Document type	Pre-release approval checklist
Recommended use	Complete before pilot release, wider customer release, or any major update

Core release rule

Do not release TTS Reports to customers unless all mandatory checks are complete, all critical blockers are resolved, and internal approval has been recorded.

1. Purpose

This checklist is used to decide whether TTS Reports V1.0 is ready to be released to customers. It protects the business from releasing a tool that looks polished but may generate incorrect reports, expose customer data, lack support ownership, or create avoidable legal and reputational risk.

2. When to use this checklist

- Before the first pilot customer receives access.
- Before the app is made available to a wider eligible customer group.
- Before any V1.x update that changes import parsing, report rendering, PDF output, hosting, security, or customer-facing wording.
- After any critical bug fix involving pass/fail status, missing assets, retest dates, customer details, or source-data mismatch.

3. Release decision summary

Decision	Meaning	Release action	Approval required
GO	All mandatory checks passed and no blockers remain.	Release to approved customer group.	Product owner + management approver
CONDITIONAL GO	Minor non-blocking issues exist but are documented and accepted.	Release only if risks are understood and support is ready.	Management approver
NO-GO	One or more release blockers remain unresolved.	Do not release. Fix, retest, and repeat checklist.	Product owner

4. Mandatory release checklist

How to complete this section

Each item should be marked complete only when evidence exists. For example: test file names, screenshots, generated reports, support contact details, hosting URL, SSL confirmation, approval email, or release sign-off notes.

Done	Release check	Evidence required	Owner	Result / notes
☐	Supported files tested	Test current supported file types against known sample files. Record file names and test date.	Technical maintainer	
☐	Reports checked against source data	Verify asset counts, pass/fail counts, failed items, retest dates, and customer/site details against the original source files.	Product owner / tester	
☐	Basic Report output checked	Generate Basic Report from each test file type. Confirm report content, layout, totals, and PDF export.	Tester	
☐	Pro Report output checked	Generate Pro Report from each test file type. Confirm title page, summary, detailed results, formatting, and pagination.	Tester	
☐	Upcoming Retest Report output checked	Confirm due/overdue items are calculated and displayed correctly from source data.	Tester	
☐	PDF preview and downloaded PDF match	Compare in-app preview with downloaded PDF for the same source file and report type.	Tester	
☐	Terms/disclaimer included	Confirm Terms of Use link is visible and report/user disclaimer wording is included where required.	Product owner	
☐	Privacy wording included	Confirm data handling wording explains temporary processing, no intentional permanent storage, and user responsibility for saving reports.	Product owner	
☐	Version number visible	Confirm app footer or interface clearly shows current version/build label.	Technical maintainer	
☐	Known issues documented	Known Issues document/page has been updated and reviewed before release.	Product owner	
☐	Support contact confirmed	Confirm support email/phone/internal owner is correct and staff know where to send issues.	Support lead	
☐	Hosting tested	Confirm hosted app loads, upload works, reports generate, downloads work, and server logs show no critical errors.	Technical maintainer	
☐	SSL enabled	Confirm production/pilot URL uses HTTPS and browser does not show security warnings.	Technical maintainer	
☐	File deletion process confirmed	Confirm uploaded files and generated reports are not retained beyond the agreed temporary processing period.	Technical maintainer	
☐	Internal approval received	Record approval from product owner/management before customer release.	Management approver	

5. Release blockers

If any of the following are present, the decision should be NO-GO until resolved and retested:

- Imported asset count does not match the source file.
- Pass/fail totals do not match the source file.
- Failed items are missing, incorrectly labelled, or shown as passed.
- Retest dates are wrong or misleading.
- Customer, site, business, or technician details are incorrect.
- Duplicate/latest-test handling produces incorrect report results.
- Basic, Pro, or Upcoming Retest reports render materially different results from the same source data.
- PDF preview and downloaded PDF do not match.
- Unsupported file types are accepted without clear warning.
- Terms, privacy wording, or report disclaimer are missing.
- Hosted app is not using HTTPS/SSL.
- Uploaded files or generated reports are retained without an approved reason.
- Support owner/contact is unclear.
- There is no internal approval for release.

6. Evidence pack requirements

Before approval, keep a simple release evidence pack. This does not need to be complicated, but it should allow the business to explain what was tested and why the release decision was made.

- Copy of this completed checklist.
- List of sample files tested, including file type and source software.
- Generated Basic, Pro, and Upcoming Retest reports from test files.
- Screenshots of successful import, asset register review, report preview, and PDF download.
- Known issues list at time of release.
- Release notes/changelog for the version being released.
- Approval note or email from authorised internal approver.
- Rollback plan or location of the previous stable build.

7. Minimum testing matrix

File type	Import	Asset register	Basic Report	Pro Report	Upcoming Retest
.padfx - aPAT export	☐ Pass ☐ Fail	☐ Pass ☐ Fail	☐ Pass ☐ Fail	☐ Pass ☐ Fail	☐ Pass ☐ Fail
.apx - supported export	☐ Pass ☐ Fail	☐ Pass ☐ Fail	☐ Pass ☐ Fail	☐ Pass ☐ Fail	☐ Pass ☐ Fail
.xlsx - ES Manager export	☐ Pass ☐ Fail	☐ Pass ☐ Fail	☐ Pass ☐ Fail	☐ Pass ☐ Fail	☐ Pass ☐ Fail
.pdf - aPAT PDF export	☐ Pass ☐ Fail	☐ Pass ☐ Fail	☐ Pass ☐ Fail	☐ Pass ☐ Fail	☐ Pass ☐ Fail
Any retained CSV workflow	☐ Pass ☐ Fail	☐ Pass ☐ Fail	☐ Pass ☐ Fail	☐ Pass ☐ Fail	☐ Pass ☐ Fail

8. Sign-off section

Role	Name	Decision / approval	Date
Product owner		☐ Approved ☐ Not approved	
Technical maintainer		☐ Approved ☐ Not approved	
Support lead		☐ Approved ☐ Not approved	
Management approver		☐ Approved ☐ Not approved	

Final release statement

Release is approved only when all mandatory checks are complete, no release blockers remain unresolved, and the sign-off section has been completed by the required internal approvers.

9. Post-release monitoring

For the first release window, monitor customer feedback closely. The app should remain in a controlled release state until the business is confident that report outputs are accurate and support load is manageable.

- Monitor bug reports daily during the first pilot week.
- Escalate any pass/fail, missing asset, incorrect date, or source mismatch issue immediately.
- Pause wider release if a critical report accuracy issue is confirmed.
- Update the Known Issues and Release Notes documents after any fix.
- Do not add new features during release monitoring unless required to resolve a blocker.
