

TTS REPORTS

V1.0 Stable Build

Customer Quick Start Guide

A short practical guide for generating PDF reports from supported exported test data.

Purpose

Make TTS Reports simple for customers to use and reduce how do I use this support calls.

Guide item	Details
Product	TTS Reports V1.0 Stable Build
Audience	Eligible Test and Tag Supplies customers and support staff
Main workflow	Export, upload, review, generate, preview, download, check
Important reminder	The user must review all report data before sending it to a customer.

Quick workflow

The simple version

Export your data, upload it into TTS Reports, review the Asset Register, generate the report, preview it, download the PDF, then check it before sending it to your customer.

Step	Action	Result
1	Export your data from aPAT / ES Manager	You have a supported source file ready to upload
2	Open TTS Reports	The reporting app is ready
3	Upload the file	The app imports the asset/test data
4	Review the Asset Register	You confirm the imported records look correct
5	Generate report	You create the selected report type
6	Preview report	You visually check the report before export
7	Download PDF	You save the final report
8	Check before sending to customer	You verify the report is complete and accurate

Steps 1-4: Import and review

1. Export your data from aPAT / ES Manager Do: Export the project or report data from your testing software using a supported file format. Check: The file relates to the correct customer, site, job, and test period.	2. Open TTS Reports Do: Open TTS Reports in a supported browser such as Chrome, Edge, Safari, or Firefox. Check: The current V1.0 Stable app has loaded correctly.
3. Upload the file Do: Use the import/upload area to select the exported file and wait for processing. Check: The upload completes and asset/test records appear.	4. Review the Asset Register Do: Review the imported assets, locations, dates, and visible pass/fail results. Check: Asset count, customer/site details, dates, and results look correct.

Important

Do not generate or send a report if the Asset Register looks wrong, incomplete, duplicated, or inconsistent with the source file.

Steps 5-8: Generate and check the report

5. Generate report Do: Choose the report type you need: Basic Report, Pro Report, or Upcoming Retest Report. Check: The selected report type matches what you intend to provide.	6. Preview report Do: Review the report preview before downloading the PDF. Check: Customer/site details, assets, results, dates, and layout appear correct.
7. Download PDF Do: Download the generated PDF and save it in the correct customer/job folder. Check: Open the downloaded PDF and confirm it matches the preview.	8. Check before sending Do: Complete a final review before sending the PDF to your customer. Check: All critical details are correct and the report is ready to issue.

Core message

TTS Reports helps format imported data. It does not independently verify compliance. The user remains responsible for checking the report before issuing it.

Final pre-send checklist

Check item	Complete?
Correct customer and site details shown	Yes / No
Asset count appears correct	Yes / No
Pass/fail results appear correct	Yes / No
Failed items are included where expected	Yes / No
Retest dates are correct	Yes / No
Report type is correct	Yes / No
Preview and downloaded PDF match	Yes / No
PDF has been opened after download	Yes / No
Report has been reviewed before sending	Yes / No

Do not send if unsure

If any critical information looks wrong, missing, duplicated, or incomplete, do not send the report. Re-check the source file and contact support if required.

Common issues and quick fixes

Issue	What to check
File will not upload	Confirm the file type is supported and that the file is not empty, damaged, or the wrong export.
No assets appear after upload	Check that the exported file contains test data and not only a summary or blank project.
Failed items are missing	Do not send the report. Treat this as a critical accuracy issue and report it.
Downloaded PDF looks different from preview	Open the PDF again, regenerate if needed, and report the issue if it continues.

When to contact support

Contact support if	Include with the support request
The report shows an incorrect pass/fail, failed items are missing, asset count is wrong, or the PDF is blank/incomplete.	Source file type, tester/software used, screenshot of the issue, generated PDF if safe to share, and a short explanation of expected versus actual result.
