

TTS Reports V1.0

Release Notes / Changelog Template

Repeatable release documentation template for version-controlled development, support visibility and rollback readiness.

Purpose

Keep every TTS Reports release controlled, traceable and explainable. Each release should record what changed, what was tested, what remains unresolved and how to roll back if a release causes problems.

Document Control	Details
Product	TTS Reports
Build referenced	TTS_REPORTS_v1_0_STABLE_BUILD_VERSION_LABEL
Audience	Internal product owner, developer/maintainer, support team, management
Status	Reusable release notes and changelog template
Prepared	June 2026

How to use this template

1. Copy this template for each new TTS Reports release.
2. Assign a version number before testing begins.
3. Record all added, changed, fixed and removed items before release.
4. Complete the testing section using the current supported sample files.
5. Record known issues honestly, even if they are minor.
6. Add rollback notes before deployment so the business knows how to recover if the release fails.
7. Save the completed document beside the release ZIP/build files.

Version control rule

A release is not finished until the release notes are finished. If the change cannot be explained clearly in this template, the release is probably not ready.

Version numbering guide

Version type	Example	Use when
Major release	V2.0.0	The product changes category, such as adding accounts, cloud storage, subscription features or major architecture changes.
Minor release	V1.1.0	A controlled feature or workflow improvement is added without changing the product category.
Patch release	V1.0.1	A bug fix, compatibility fix, documentation update or small usability correction is released.
Pilot build	V1.1.0 Pilot	Used for selected customers before wider release.

Internal build	V1.0.1 Internal	Used for internal testing only before customer-facing release.
----------------	-----------------	--

Release Notes Template

Complete the following section for every release. Leave no critical section blank. Use "None" where there were no additions, removals or known issues.

1. Release identification

Field	Entry / Notes
Version number	e.g. V1.0.1
Release date	DD Month YYYY
Release type	Internal / Pilot / Customer Release / Patch / Hotfix
Build file name	e.g. TTS_REPORTS_V1_0_1.zip
Prepared by	Name
Approved by	Name
Release status	Draft / Testing / Approved / Released / Rolled Back
Related documents	Testing checklist, bug register, feature register, support guide, user guide

2. Release summary

Field	Entry / Notes
Plain-English summary	Briefly explain what this release does and why it exists.
Primary reason for release	Bug fix / report accuracy / pilot readiness / usability / compatibility / security / documentation
Primary risk addressed	What business, customer or technical risk does this release reduce?
User impact	What will customers or staff notice?
Support impact	Does this reduce support calls, require new support guidance, or change troubleshooting?

3. Added

List new features, new screens, new report sections, new supported behaviours or new documentation. Use "None" if nothing was added.

Item	Description	Why added	User impact
[Added item 1]	[Description]	[Reason]	[Impact]
[Added item 2]	[Description]	[Reason]	[Impact]
[Added item 3]	[Description]	[Reason]	[Impact]

4. Changed

List changes to existing behaviour, wording, report layout, import logic, settings, navigation, help text or internal workflow.

Changed item	Previous behaviour	New behaviour	Reason
[Changed item 1]	[Before]	[After]	[Reason]
[Changed item 2]	[Before]	[After]	[Reason]
[Changed item 3]	[Before]	[After]	[Reason]

5. Fixed

List bugs corrected in this release. Include the bug/issue ID where possible.

Bug / Issue ID	Problem fixed	Severity	How fix was verified
[BUG-001]	[Description]	Critical / High / Medium / Low	[Test performed]
[BUG-002]	[Description]	Critical / High / Medium / Low	[Test performed]

[BUG-003]	[Description]	Critical / High / Medium / Low	[Test performed]
-----------	---------------	--------------------------------	------------------

6. Removed

List anything removed, disabled or intentionally deferred. This helps support staff understand why something is no longer visible.

Removed / disabled item	Reason	Customer impact	Support note
[Item]	[Reason]	[Impact]	[What staff should say]
[Item]	[Reason]	[Impact]	[What staff should say]

7. Known issues

Record unresolved issues honestly. Known issues should not block release unless they affect report accuracy, missing assets, pass/fail status, retest dates or customer/site details.

Issue ID	Known issue	Severity	Workaround	Release blocker?
[KI-001]	[Description]	Critical / High / Medium / Low	[Workaround]	Yes / No
[KI-002]	[Description]	Critical / High / Medium / Low	[Workaround]	Yes / No
[KI-003]	[Description]	Critical / High / Medium / Low	[Workaround]	Yes / No

Automatic release blockers

Do not release to wider customers if there are unresolved issues involving incorrect pass/fail status, missing failed items, missing assets, incorrect retest dates, incorrect customer/site details, or preview/download mismatch.

8. Testing completed

Record testing completed before release. Attach or reference the full Report Accuracy Testing Checklist for important releases.

Check	Pass / Fail / N/A	Notes
App opens successfully		
Supported file types import successfully		
Imported asset count matches source file		
Pass/fail count matches source file		
Failed items appear correctly		
Retest dates are correct		
Customer/site details are correct		
Duplicate/latest test handling works		
Basic Report output checked		
Pro Report output checked		
Upcoming Retest Report output checked		
PDF preview matches downloaded PDF		
Settings/business profile still work		
Browser smoke test completed		
No console-breaking error found		
Known issues reviewed		
Support guide/update notes reviewed		

9. Files tested

File type	Source workflow	Sample file / reference	Result	Notes
.padfx	aPAT / ES Manager	[sample/reference]	Pass / Fail / N/A	[Notes]
.apx	aPAT / ES Manager	[sample/reference]	Pass / Fail / N/A	[Notes]
.xlsx	ES Manager export	[sample/reference]	Pass / Fail / N/A	[Notes]
.pdf	aPAT PDF export	[sample/reference]	Pass / Fail / N/A	[Notes]
.csv	Legacy/detailed results if retained	[sample/reference]	Pass / Fail / N/A	[Notes]

10. Rollback notes

Complete this before release. Rollback notes are required so the business can return to the previous stable version if the new build causes data or report problems.

Field	Entry / Notes
Previous stable version	e.g. V1.0.0
Previous stable build location	Where the prior ZIP/build is stored
Rollback trigger	What issue would cause rollback?
Rollback owner	Who can approve rollback?
Rollback steps	How to restore the previous version
Customer notification required?	Yes / No - describe wording if yes
Support action after rollback	What staff should tell affected users

11. Customer / staff communication

Audience	Notification required?	Message / notes
Internal staff	Yes / No	[What staff need to know]
Pilot customers	Yes / No	[Pilot update wording]
Eligible customers	Yes / No	[Customer-facing release note]
Management	Yes / No	[Decision/risk summary]

12. Release approval

Approval item	Name	Date	Approved?
Product owner	[Name]	[Date]	Yes / No
Technical maintainer	[Name]	[Date]	Yes / No
Support owner	[Name]	[Date]	Yes / No
Management/legal if required	[Name]	[Date]	Yes / No / N/A

Post-release review

Complete this after the release has been used by staff or customers. This closes the loop between release, support, bug reporting and future roadmap decisions.

Field	Entry / Notes
Review date	DD Month YYYY
Issues reported after release	Summary or issue IDs
Customer feedback	Summary
Support impact	Reduced / unchanged / increased support load
Decision	Keep release / patch release / rollback / investigate
Next planned version	e.g. V1.0.2 or V1.1.0

Completed changelog example - V1.0.0 Stable

Use this example as a model for concise release notes. Replace example wording with the actual release details for future builds.

Section	Example entry
Version number	V1.0.0 Stable
Release date	June 2026
Summary	Stable baseline build for TTS Reports. Provides supported file import, Asset Register review, report preview and PDF generation.
Added	Version label, stable build packaging, project documentation and report generation workflow.
Changed	Home page focused on Asset Register dashboard; report generation moved to Reports page.
Fixed	Resolved report generation/save workflow issues identified during final testing.

Removed	Report controls removed from home page to reduce clutter and keep workflow clear.
Known issues	Further customer pilot testing required across real-world exported files.
Testing completed	Import and report generation tested using available supported sample files.
Rollback notes	Previous stable ZIP retained. Revert if report generation or import reliability breaks.

Final release discipline

Do not use release notes as decoration. They are the control system that protects the project from silent changes, accidental regressions and uncontrolled feature creep.
